

The NDDiss2 ϵ class*

2017-05-09

Abstract

The NDDiss2 ϵ class can be used to typeset dissertations submitted to the University of Notre Dame's Graduate School. This class conforms with the Graduate School guidelines as of Spring 2013 for the layout of the Ph.D. dissertations and Master's theses.

1 Introduction

The L^AT_EX 2_ε document class NDdiss2_ε is suitable for producing dissertations and theses conforming to the Spring 2013 guidelines of the Graduate School at the University of Notre Dame. The package extends the standard L^AT_EX `book` class.

The latest version of this class and related documentation can be found in a few places:

- On CTAN: <https://ctan.org/pkg/nddiss>
- On GitHub: <https://github.com/ndlib/nddiss>
- On the University of Notre Dame's Graduate School website: <http://graduateschool.nd.edu/>

1.1 Disclaimer

While this class does as much formatting as it can, there are a few formatting items that you, the user, must do manually (see Section 5). Please keep in mind that only *you* are responsible for the correct formatting of your dissertation/thesis. Should you have questions, please consult the official formatting guide or email dteditor@nd.edu.

1.2 Dependencies and Limitations

This classfile depends on many other packages to be installed. All of these required packages are available through MiKTeX and TeXLive, and chances are good they are already installed by your TeX distribution. Refer to section 6 for a list of the essential packages.

The document class has only been tested with a small subset of available packages. There are numerous packages you may want to use for your work, but they may have to be modified accordingly. Things lacking include support for the `subfigure` and `subcaption` package and proper formatting of the captions in such an environment. Formatting of the captions could be much easier with the `caption`¹ in general, and is a thing-to-do for future versions. Permitting use of the `subfigure` and `subcaption` packages would also be a good thing to do if an update is

¹`caption` package by Axel Sommerfeldt v3.0b[2004/05/16] and higher

ever made for reasons other than resolving conflicts caused by changing Graduate School regulations. If you want to use a `subfigure` environment and don't need the caption capabilities of the `subcaption` package, adding the following code to your preamble may allow you to do this and still have your captions formatted according to the Graduate School's rules.

```
\usepackage{subcaption}
\makeatletter
\renewcommand\LT@makecaption[3]{%
  \LT@mcol\LT@cols c{\hbox to\z@{\hss\parbox[t]{\LTcapwidth{%
    \vskip\abovetableskip%
    \centering\normalspacing
    #1{#2 }\\[\single@skip]
    {#3}\par
    \endgraf\vskip\belowtablesip}%
    \hss}}}
\makeatother
```

1.3 History

The `NDdiss2 ϵ` package is an extensive rewrite by Sameer Vijay of an earlier `NDthesis` class for formatting dissertations. Megan Patnott updated `NDdiss2 ϵ` to the 2013 Graduate School Formatting guidelines. The `NDThesis` class was by D. A. Peterson.

2 Quick Start

This section provides a template you can use to get started. The distribution comes with a more detailed file, `template.tex`, that is similar, but more detailed.

```
\documentclass[numrefs,final]{nddiss2e}

\begin{document}

\frontmatter

\title{Title in Title Caps}
\author{Your Name}
\work{Dissertation}
\degaward{Doctor of Philosophy}
\advisor{}
\department{}
\maketitle
\makepublicdomain % There is also a copyright option

\begin{abstract}
Abstract here
```

```

\end{abstract}

% dedication is optional
\begin{dedication}
For Someone
\end{dedication}

\tableofcontents
\listoffigures
\listoftables

% list of symbols is optional
\begin{symbols}
\sym{a}{definition of a}
\end{symbol}

% preface is optional
\begin{preface}
Preface here
\end{preface}

\begin{acknowledge}
Thanks to everyone
\end{acknowledge}

\mainmatter

\chapter{A New Dawn} % Chapter 1
All the text ...

\appendix
\chapter{Additional Data} % Appendix A

\backmatter
\bibliographystyle{nddiss2e}
\bibliography{bibdatabase}

\end{document}

```

3 Usage

Invoke the NDdiss2_ϵ document class by adding `\documentclass[<options>]{nddiss2e}` at the beginning of your \LaTeX source file. For most people the options `\documentclass[draft]{nddiss2e}` is good enough for the initial revisions. If you want your figures to display, use `\documentclass[review]{nddiss2e}`.

Use the option `\documentclass[final]{nddiss2e}` for your formatting check submission, and `\documentclass[final,noinfo]{nddiss2e}` for the final sub-

mitted version.

If you have two advisors, add the option `twoadvisors` here, and then use `\secondadvisor{}` later on the title page to give the name of the second advisor.

By default, all documents produced using this class are formatted as one-sided, doublespaced, letter-sized pages, per the Graduate School requirements. In theory, the class file’s specifications should override your system’s defaults. If, however, you are getting A4 paper, try adding `\pdfpagewidth{8.5in}` and `\pdfpageheight{11in}` immediately after the `\documentclass` in your file.

3.1 Options

draft Exactly *one* of these options must be used. The **draft** and **review** options enable faster processing of the document and also include annotations to help write and edit it.

The **draft** option enables a fast processing and preliminary document showing the labels for citations, tables, figures etc. and a black solid rule highlighting the horizontal overflows. Additionally, figures are replaced with placement boxes showing where the included figure would be placed. Such a document would be the one you would prepare for revising your text during writing stages.

The **review** option makes it possible to prepare a document that is one step closer to the final version. Almost all the formatting of the final version is present, but the labels and keys as in the **draft** option are also displayed. A document prepared with the **review** option would be the one to personally check for proper formatting and possibly giving to your advisor if she wished to suggest corrections.

The **final** option produces the document to be submitted to the Graduate School for formatting checks and as the final version.

twoadvisors The **twoadvisors** option will produce a title page with space for two advisors. Use the `\secondadvisor` macro command (discussed in Section 4.1) on the title page to give the name of the second advisor.

noinfo The **noinfo** option disables the information page produced when the **review** or **final** style options are used. It is recommended that you only use this option when making the final submission to the Graduate School.

nonatbib With this option, `nddiss2e` will not load the `natbib` package and allow to use a different bibliography package, e.g., `biblatex` instead.

numrefs These options determine how citations are displayed in the text. The default style is **numrefs**. The **numrefs** option produces a numbered citation style by using `natbib` and the “`nddiss2e`” or “`nddiss2enoarticletitles`” citation style file². The **textrefs** option changes the citation style to be similar to “author-date” style with the same files.

sort At most one of these options should be selected. The **sort** option will cause both numerical and “author-date” style references to be sorted in the order that they appear in the bibliography when multiple references are cited. The **compress** **sort&compress**

²`nddiss2e.bst` is a slight modification of `abbrvnat.bst` in the `natbib` package; `nddiss2enoarticletitles.bst` is essentially the same as `nddiss2e`, but does not display the titles of journal articles, as this is the standard in some fields; `nddiss2enosort.bst` is essentially the same as `nddiss2e`, but sorts by order of appearance in text instead of author name.

option compresses numerical citations, e.g. it turns [1,2,3] into [1-3], and does nothing to “author-date” style references. The **sort&compress** option first sorts and then compresses numerical references, and only sorts “author-date” style references.

Since the same set of packages and style files result in differing citation formats, refer to the documentation for **natnotes.dvi** in your **TEXMF** tree, to be aware of the various ways in which you can make a citation in your text.

10pt These options adjust the font size of the body text. The choice is only applicable when the **draft** option is used, and defaults to **10pt**. When **review** or **final**
11pt is used, this option is ignored and **12pt** is used.
12pt

twoside The **twoside** option causes the class file to prepare a document meant to be printed double-sided. This option is strictly for if you want to prepare a two-sided document for your own use. The only difference from the one-sided document is in the page layout. Do NOT use this option when preparing to submit it to the Graduate School.

showframe The **showframe** option shows visible frames for the text area and page. This can be useful to ensure that all content is within the content area and not running over into the margins.

linenumbers The **linenumbers** option enables the display of line numbers throughout the document.

nocenter The **nocenter** option allows non-centered chapter titles. Do NOT turn in your document this way to the Graduate School!

openbib The **openbib** option formats your bibliography in the following manner:

Author

Article/book title

Other information

Website, if applicable

Usually you would not need to use this option since the default layout of the **bibliography** is acceptable.

4 Arrangement of Contents

A dissertation or a thesis document contains the following parts, in the order listed. Only those marked as optional may be omitted.

1. Title Page
2. Copyright page
3. Abstract (*optional for Master's thesis*)
4. Dedication (*optional*)
5. Table of Contents
6. List of Figures
7. List of Tables

8. List of Symbols (*optional*)
9. Preface (*optional*)
10. Acknowledgments (*optional*)
11. Text
12. Appendix (or Appendices) (*optional*)
13. Bibliography (or References, or Works cited)

The macros and environments described below ease the formatting of these parts.

4.1 Title Page

`\maketitle` The title page is generated by `\maketitle` with no arguments. This macro has been modified for providing a title page in the correct format.

You can set information to display on the title page by using the following commands before invoking `\maketitle`.

- | | |
|-------------------------------|---|
| <code>\title{}</code> | <ul style="list-style-type: none"> • The title of the document, using the <code>\title</code> macro. You may use linebreaks within the title, protected via <code>\protect\\</code> and the title may be up to four lines long. |
| <code>\author{}</code> | <ul style="list-style-type: none"> • Give your name in full and exactly as registered with the Graduate School, using the <code>\author</code> macro, e.g. <code>\author{Gary Graham Gordon-Graeme}</code>. |
| <code>\work{}</code> | <ul style="list-style-type: none"> • Whether the document is a <i>Thesis</i> or a <i>Dissertation</i> as the argument of the <code>\work</code> macro, e.g. <code>\work{Dissertation}</code>. |
| <code>\degaward{}</code> | <ul style="list-style-type: none"> • Specify the degree you're aiming for with the <code>\degaward</code> macro. Should be one of <code>\degaward{Doctor of Philosophy}</code> (without the "in <i>subject</i>" or <code>\degaward{Master of Science\\in\\Engineering}</code>. |
| <code>\advisor{}</code> | <ul style="list-style-type: none"> • Give the name of your advisor with the <code>\advisor</code> macro. |
| <code>\secondadvisor{}</code> | <ul style="list-style-type: none"> • Give the name of your second advisor, if any, with the <code>\secondadvisor</code> macro. You also need to pass in the <code>twoadvisors</code> option in the <code>\documentclass</code> declaration. |
| <code>\department{}</code> | <ul style="list-style-type: none"> • Give the name of your department with the <code>\department</code> macro, e.g. <code>\department{Gnological Engineering}</code>. |
| <code>\degdate{}</code> | <ul style="list-style-type: none"> • The month and year of the defense of the thesis with the <code>\degdate</code> e.g. <code>\degdate{June 2004}</code>. If you forget to declare this, the current month/year will be used. |

4.2 Copyright Page

`\makecopyright` The `\makecopyright` macro should be invoked after `\maketitle` to produce a copyright page. Prior to calling `\makecopyright`, you may specify a different name for the copyright holder (the default is the name given through the `\author` macro) and for the copyright year (the default being the current year). Do this with the `\copyrightholder{<name>}` and `\copyrightyear{<year>}` macros.

`\copyrightholder{}`

`\copyrightyear{}`

`\makepublicdomain` Alternatively, you can use `\makepublicdomain` to produce a page with the message “This document is in the public domain.” Note that the absence of the copyright page does *not* place your dissertation in the public domain, you must declare it as such explicitly.

4.3 Abstract Page(s)

`abstract` The abstract text should be placed between `\begin{abstract}` and `\end{abstract}`. If the abstract is longer than one page, the environment will place the author’s name in the top-right header.

`\abstractname{}` You may use `\abstractname{<text>}` to change the abstract caption to `text`. Default name: **Abstract**. You probably don’t need to change it.

4.4 Dedication

`dedication` The dedication is optional. If you want one, use the `dedication` environment. The format of dedication is essentially free. This environment will center the text of your dedication vertically on the page.

`\dedicationname{}` You may use `\dedicationname{<text>}` to change the title for the dedication page. Default name: `\mbox{}` i.e. an empty title. You probably don’t need to change it.

4.5 Table of Contents; Lists of Figures and Tables

`\tableofcontents` Use the macros `\tableofcontents`, `\listoffigures` and `\listoftables`, *in this order*, to produce the required table of contents and lists of figures and tables.

`\listoffigures`

`\listoftables` You may use `\contentsname`, `\listfigurename` and `\listtablename` to change the titles for these sections. By default they are **CONTENTS**, **FIGURES**, and **TABLES**. You probably don’t need to change them.

`\contentsname{}`

`\listfigurename{}`

`\listtablename{}`

4.6 List of Symbols

`symbols` The list of symbols is optional. Use the `symbols` environment to format a list of symbols/abbreviations used in your work. The environment takes an optional argument specifying the desired format, e.g. `\begin{symbols}[c1]` for first column centered and the next column aligned left. By default, the first column will be right aligned and the second column will be left aligned. You may use any of the standard `tabular` column alignment options.

`\sym{...}` The command `\sym{<symbol>}{<definition>}` may make the task of entering the symbols and their meanings in the `symbols` environment easier. `\sym` takes

two arguments: the first, a math “object” and the second, the plain text describing the symbol. Since the first argument is in math mode, any plain text needs to be wrapped with `\mathrm{..}`. Likewise, any math symbol in the second argument needs to be placed in `$..$`. Example: `\sym{\beta_\mathrm{norm}}{Definition for β }`

`\symbolsname{}` You may use `\symbolsname{}` to change the title of the symbols section. Default name: `SYMBOLS`.

4.7 Preface

`preface` The `preface` environment is provided for formatting the preface to your work.

`\prefacename{}` You may use `\prefacename` to change the name of this section. Default name: `PREFACE`.

4.8 Acknowledgments

`acknowledgments` The environment `acknowledgments` is used to format the acknowledgment *chapter*.

`\acknowledgename{}` You may use `\acknowledgename` to change the name of this section. Default name: `Acknowledgments`.

4.9 Text

`\mainmatter` Use the macro `\mainmatter` to mark the beginning of your text. You can then use `\part`, `\chapter`, `\section`, `\subsection`, and `\subsubsection` commands, as you would with the `book` class. Text is formatted in `\normalspacing` i.e. double-spacing. The pages are numbered in `plain` pagestyle such that the page numbers are centered in the bottom. The `chapter` titles can be multi-line, and if so are formatted doubly spaced.

`\unnumchapter{}` Use the macro `\unnumchapter` to create to create unnumbered chapters that appear in the Table of Contents.

4.10 Appendix

`\appendix` Use the command `\appendix` after the last normal chapter to signal that all following chapters are to be appendices. This use is the same as in the `book` class. To begin an appendix, use the `\chapter{<title>}` macro.

4.11 Backmatter

`\backmatter` The `\backmatter` macro separates the bibliography, index and glossary from the main matter and any appendices.

4.12 Bibliography

`\bibliography` If you are using `BIBTEX` (and why would you not want to use `BIBTEX`?), use the `\bibliography{<bibfile>}` macro to generate the bibliography. You should refer to `BIBTEX` manual for details about making a `.bib` file and format for the entries.

For citing references in the text, the package `natbib` is included with either the settings `numbers,sort&compress` (`numrefs` option) or `authoryear,sort` (`textrefs` option). The package `natbib` is a package that has numerous macros for *citing* in different ways.

Warning: The packages `cite` and `citation` are NOT compatible with the `natbib` package, and will cause errors if used.

`thebibliography` If you are not using `BIBTEX` make your own bibliography by using the `thebibliography` environment. In this case, you would have to write the reference entries in the right format in your `.tex` source file itself. If you are using the `textrefs` option, you'll need to consult the `natbib` manual to ensure that you enter your entries in the format required by the package.

`\bibname{}` You may use `\bibname{newbibname}` to change the name of this section. Default name: `Bibliography`.

4.13 Chapter-wise Bibliography

By default the bibliography appears at the end of your work and contains all the references from the entire entity. If you need to have a separate bibliography for each chapter, you can do it in the following way. First, load the package `chapterbib` without any options in the preamble of your main source file and redefine the commands `\bibname` and `\bibsection` as shown below.

```
%% Main source file %%
\documentclass[...]{nddiss2e}
\usepackage{chapterbib}
\renewcommand{\bibname}{Cited works}
\renewcommand{\bibsection}{\section{\bibname}}
...
\begin{document}
\include{chptr1}
...
\include{appndx}
\end{document}
```

To process the bibliography for each chapter individually, the chapters or sections must be separated into different files and *include* them in the main file, as shown above. Each such `\included` file must contain its own `\bibliographystyle{nddiss2e}` and `\bibliography{...}` command at an appropriate position. There should not be any bibliographic commands in the main source file.

After compiling the main `tex` file once (with `latex` or `pdflatex`), the `.aux` files needed by `bibtex` will have been created and you can then run `bibtex` on each of the separate source files to obtain a `.bbl` for each file. The remaining steps are the same as for a normal `.tex` file.

You can find more details of this in the `natbib` manual.

5 Note For Authors

The dissertation author must make sure that the following conditions are met in order to generate a dissertation acceptable by the Graduate School:

- The List of Figures must be *before* the List of Tables, i.e. the macro command `\listoffigures` comes before `\listoftables` in the frontmatter.
- Table captions must be *above* the corresponding table, In case of the `table` environment, this can be achieved by putting `\caption` before you include the table (e.g. in a `tabular` environment).
- Figure captions should be *below* the corresponding figure. In the figure environment, the `\caption` goes after the `\includegraphics` macro command.
- The bibliography is the last section/chapter of the thesis—unless you are using the *chapter-wise* bibliography.

5.1 Tips and Suggestions

- It is *strongly* recommended that you compile your document with pdfL^AT_EX. Compiling to dvi or postscript first may result in “fuzzy” fonts when viewing the document on your screen. Additionally, the benefits of `hyperref` and `pdflscape` are only available if you compile using pdfL^AT_EX.
- Use the `\toprule`, `\midrule` and `\bottomrule` macro commands (from the `booktabs` package) in tables for generating the appropriate horizontal rules. Refrain from using vertical rules to separate columns in tables as much as possible.
- Use the `threeparttable` environment for tables with tablenotes.
- Use the `longtable` environment for handling very long tabular materials. Example:

```
\begin{longtable}{lc}
\caption[] {LONG TABLE CAPTION \label{tab:longtable} }
\toprule
Heading 1 & Heading 2 \\
\midrule
\endfirsthead
\caption[] { } \\ % doesn't matter what text is in the continued caption.
\midrule
Heading 1 & Heading 2 \\
\midrule
\endhead
\endfoot
\bottomrule
\endlastfoot
% Now the tabular material %
```

```
Long & Table etc. \\
\end{longtable}
```

- If a figure or table is very wide and will not fit on a page, use the `landscape` environment (from the included `lscape` package) to format them in *landscape* mode. They will automatically appear on a separate page. If you use `pdfLATEX` to compile your document, then the included `pdfscape` package will flip this page on the screen for easier reading.

If the positioning of the `landscape` environment is inconvenient and leads to half-empty pages, the `afterpage` command, made available by the package with the same name, allows the text to flow around the `landscape` environment better:

```
\afterpage{%
  \begin{landscape}
    \centering
    \input{my_landscape_table}
  \end{landscape}
}
```

- The `sidewaystable` environment (from the included `rotating` package) is incompatible with the current class and should be avoided.
- Usually the width of the figure and table captions is 90% of the `textwidth` (i.e. `0.9\textwidth`). If needed, the width can be changed on a case-by-case basis by doing one of the following:

- Use a `minipage` environment of appropriate width and enclose your tabular or figure float inside it, or
- set the `\capwidth` inside the `table` or the `figure` environment, and `\LTcapwidth` *outside* the `longtable` environment, e.g.,

```
\begin{table}[H]
\setlength{\capwidth}{0.8\textwidth}
\centering
\caption{TABLE CAP\label{tab:this}}
\begin{tabular}{lc}
...
\end{tabular}
\end{table}

\setlength{\LTcapwidth}{6in}
\begin{longtable}{lccc}
...
\end{\longtable}
```

- Use the `tabularx` environment for the actual formatting of the tables (within the `table` environment). It differs slightly from `tabular` environment and you should refer to their documentation in the `TEXMF` tree for more information.

- If you've used a `longtable` environment in your document, it might be necessary to compile the document multiple times so as to get proper alignment of columns. This is documented in the `longtable` manual.
- If you wish to use `\footnotes` in the `longtable` environment, please read its documentation. There are some handicaps present.
- To cite a website in your bibliography³, use the following format in your `.bib` file:

```
@Misc{fairley2000,
author =      "N. Fairley",
title =      "Casa{XPS} {VAMAS} processing software",
howpublished = "Website",
note =      "\url{http://www.casaxps.com}",
}
```

When processed with the `nddiss2e.bst` citation style file this gives:
 111. N. Fairley. CasaXPS VAMAS processing software. Website. `http://www.casaxps.com`.

5.2 You Found Errors?

Errors in a \LaTeX document are to be expected. If you have a problem that is that seems to be more than a typo or unbalanced brace, it is possible that there is a conflict between the packages you have included and those that `NDdiss2 ϵ` uses. If you find yourself in that situation, there is a mailing list for handling support issues with `NDdiss2 ϵ` . Look through the archive, and if there are no answers, please send an email to `ND-LATEX-USERS@listserv.nd.edu` (registration required). The more effort you spend in isolating the problem or in troubleshooting will make it more likely that others can reproduce the problem and help you solve it. Also if you have a problem that you then solve, please also email the list. Your doing so will help the next person to have that problem, and will also make the maintainers aware of it, so future versions of the class file can be better.

6 Other Packages Used

A number of packages are required by default and must be present in your \TeX search path (if you use a package manager such as `MiKTeX` or `TeXLive`, it will take care of this for you). As far as possible, these have been tested for proper formatting style with the `NDdiss2 ϵ` class file. The list includes `ifthen`, `exscale`, `ifpdf`, `ifluatex`, `ifxetex`, `xspace`, `longtable`, `indentfirst`, `tabularx`, `showkeys`, `enumerate`,

³More info at <http://www.tex.ac.uk/cgi-bin/texfaq2html?label=citeURL>

latexsym, epsfig, color, graphicx, setspace⁴, amsmath, float, lscap, rotating, booktabs, and natbib⁵. Sameer urges you to read the documentation of these packages available in the TEXMF tree, if you think you might use their features or want to tweak some advanced options. Of these packages, ifpdf, longtable, natbib, booktabs, rotating, and setspace are not part of the L^AT_EX required distribution, so you may need to download them. They are all available through both MiKTeX and TeXLive; note that ifpdf is part of the oberdiek bundle, which is what you need to download to get that package if it is not already installed on your system.

Other packages may or may not be appropriate for use with the NDdiss2_ε class when producing copies to be submitted to the Graduate School. Please be careful when using packages that change the default fonts, or the page layout.

In general, the official guidelines of the Graduate School are followed to the maximum extent possible. This includes proper formatting of the title page and the abstract page (from the ndthesis package), numbering of the pages in the *frontmatter*, generation of properly formatted table of contents, list of figures etc., as well as bibliography at the end. Per the guide, the number of different fonts and font sizes used is kept to a minimum. The contents, all lists and the bibliography are single-spaced but the inter-line spacing for the rest of the document is double.

6.1 Generating PDF document

The NDdiss2_ε class also allows production of pdf documents with pdfL^AT_EX . As of Spring 2013, this is the preferred method of compilation. In this case, the hyperref and pdfscape packages are also required. The hyperref package ensures that the generated pdf document contains internal as well as external links for citations and bookmarks. A document produced by this method also contains embedded fonts (*press quality* pdf) and is suitable for electronic submission to the library and for microfilm archiving. Although the most appropriate options for hyperref are passed on, for advanced features refer to its documentation. The pdfscape package flips pages with landscape orientation in the pdf file for easier reading, but the location of the page numbers does not change.

Figures must be in pdf, jpeg, png, or gif format, and not in encapsulated postscript (eps). An easy way to convert *eps* files to *pdf* files is to use the utility **epstopdf** or **eps2pdf**, which should be available on your unix-like distribution already (should you have one). It is also possible to convert your eps files to pdfs using an online conversion tool. Searching for “eps to pdf” brought up several free options in Fall 2012.

⁴v6.7[2000/12/01] or above

⁵v8.31[2009/07/16] or above

7 The Implementation

Following is our attempt at documenting the source of the `NDdiss2 ϵ` class file for the \TeX hackers.

At the start, we define the base version of $\text{\LaTeX} 2_{\epsilon}$ needed and the label information for the `NDdiss2 ϵ` class.

```

1 \NeedsTeXFormat{LaTeX2e}[1999/12/01]
2 \ProvidesClass{nddiss2e}
3     [2016/10/16 v3.2016%
4     Notre Dame Dissertation document class]
5 %

\disssfileversion The \disssfileversion and \disssfiledate macros contain the version and the date of
\disssfiledate    the release.

6 \providecommand{\disssfileversion}{3.2017.2}
7 \providecommand{\disssfiledate}{2017/05/09}
8 %

```

New boolean variables for the options used in `NDdiss2 ϵ` class are set here with default values.

```

9 \newif\ifdisss@draft           \disss@drafttrue

37 %

```

numrefs The options **numrefs** or **textrefs** select the appropriate citation style i.e. “numbered”
textrefs or “textual”, respectively. By choosing **textrefs**, one can get “author-date” style of
citation in the text. The default is **numrefs**.

```

38 \DeclareOption{numrefs}{
39   \typeout{NUMBERED REFERENCES}\num@refstrue}
40 \DeclareOption{textrefs}{
41   \typeout{TEXTUAL REFERENCES}\num@refsfalse}
42 \DeclareOption{nonatbib}{
43   \typeout{NO NATBIB}\natbib@refsfalse}

```

The option **nocenter** allows non-centered chapter titles.

```

44 \DeclareOption{nocenter}{\centered@chaptitelfalse}
45 %

```

The **openbib** option is useful in creating indented bibliography. Usually you would not need to use this option since the default layout of the **bibliography** is very much acceptable.

```

46 \DeclareOption{openbib}{%
47   \PassOptionsToPackage{openbib}{natbib}
48 }
49 %

```

The **sort** option is passed to **natbib**, and causes multiple citations to be listed in the sequence they appear in the bibliography.

```

50 \DeclareOption{sort}{%
51   \PassOptionsToPackage{sort}{natbib}
52 }
53 %

```

The **compress** option is passed to **natbib**, and causes numerical citations to be compressed so that, e.g. 1,2,3 becomes 1-3. Does not also sort.

```

54 \DeclareOption{compress}{%
55   \PassOptionsToPackage{compress}{natbib}
56 }
57 %

```

The **sort&compress** option sorts numerical citations, and then compresses them.

```

58 \DeclareOption{sort&compress}{%
59   \PassOptionsToPackage{sort&compress}{natbib}
60 }
61 %

```

The other options are declared in the following lines.

twoadvisors The **twoadvisors** option sets the flag for modifying the layout of the title page.

```

62 \DeclareOption{twoadvisors}{\typeout{TWO ADVISORS}\typeout{}}%
63   \advisors@twotrue}
64 %

```

10pt The options 10pt, 11pt or 12pt are passed on to the `book` class if appropriate, depending
11pt on whether the `\diss@draft` flag is set true.

```

12pt 65 \DeclareOption{10pt}{%
66   \ifdiss@draft%
67     \PassOptionsToClass{10pt}{book}%
68   \else%

97     \ClassWarningNoLine{nddiss2e}%
98     {Frame only shown in review mode; not showing frame}
99   \fi
100 }

```

The `linenumbers` option enables line numbering throughout the document.

```

101 \DeclareOption{linenumbers}{%
102   \ifdiss@final%
103     \OptionNotUsed%
104     \ClassWarningNoLine{nddiss2e}%
105     {Line numbers are disabled in final mode.}%
106   \else%
107     \typeout{LINE NUMBERS}\line@numberstrue%
108   \fi
109 }

```

All options other than those defined above are ignored and a warning is printed on the screen during compile-time. After processing all the options, the `book` class is loaded with the specified options.

```

110 \DeclareOption*{\ClassWarning{nddiss2e}%
111   {UnknownOption '\CurrentOption'} }%
112 \ProcessOptions\relax
113 \LoadClass{book}
114 %

```

At this stage, the packages `ifthen`, `exscale`, `etoolbox` `ifpdf`, `ifluatex`, `ifxetex`, `longtable`, `xspace`, `indentfirst`, `tabularx`, `enumerate` and `latexsym` are loaded. It is important to load these in a specific order so as not to cause conflicts in definitions of certain macros.

```

115 \RequirePackage{ifthen,exscale,etoolbox,xpatch}
116 \RequirePackage{ifpdf,ifluatex,ifxetex}
117 \RequirePackage[
118   plainpages=false,
119   pdfpagelabels,
120   bookmarks=true,%
121   bookmarksnumbered=true,%
122   linktocpage=true,%
123   breaklinks=true,%
124   bookmarkstype=toc,%
125   colorlinks=false,%
126   pdfpagemode=UseOutlines]{hyperref}
127 \RequirePackage[pass]{geometry}
128 \RequirePackage{longtable}
129 \RequirePackage[flushleft]{threeparttable}
130 \RequirePackage[flushleft]{threeparttablex}
131 \RequirePackage{xspace}
132 \RequirePackage{indentfirst}
133 \RequirePackage{tabularx}
134 \RequirePackage{enumitem}
135 \RequirePackage{latexsym}
136 \RequirePackage{textcase}
137 %

```

If the `\diss@final` is set false (when using `draft` or `review` option) then the `showkeys` package is also loaded.

```

138 % \ifdiss@final\relax\else\RequirePackage{showkeys}\fi
139 %

```

Depending in whether you are using pdf \LaTeX or plain \LaTeX , `epsfig`, `color` and `graphicx` are loaded with respective options.

```

140 \ifbool{bool{luatex}}{%
141   \ifcsdef{pdfadjustspacing}{%
142     \let\pdfadjustspacing \adjustspacing
143   }
144 }{}
145 \ifbool{bool{pdf} or bool{xetex} or bool{luatex}}{%
146   \RequirePackage{epsfig}
147   \RequirePackage{color}
148   \RequirePackage{graphicx}
149   \AtBeginDocument{
150     \pdfadjustspacing=1
151   }
152 }{}
153 \RequirePackage[dvips]{epsfig}
154 \RequirePackage[dvips]{color}
155 \RequirePackage[dvips]{graphicx}
156 }
157 %

```

Now the `natbib` package is loaded with its options, appropriate to `numrefs` or `textrefs` class option. If `numrefs` is specified, then `natbib` is read-in with its options for “numbered” references and sorted & compressed (eg. [3–6,8–10]). In this case, the default delimiter is square brackets and the default separator is a comma. For the `textrefs` option, the `natbib` package is read-in so as to sort the references in an “author-date” style of citations. The default delimiter and separator, in this case, are round brackets and colon, respectively.

```

158 \ifnatbib@refs
159   \ifnum@refs
160     \RequirePackage[numbers]{natbib}
161   \else
162     \RequirePackage[authoryear]{natbib}
163   \fi
164 \fi

```

Additionally, the packages `amsmath`, `float`, `booktabs`, `rotating`, `url` and `setspace` are loaded when (pdf) \LaTeX processes `\begin{document}`. Again, the order of these packages is important. Additionally when using pdf \LaTeX , the package `hyperref` (for internal/external links in the document) is also loaded. The options for this package have been tested to produce a document which can be printed on laser printers without any problems because of colored link boxes. Megan added required package `pdflscape`, which is part of the oberdiek bundle in MiKTeX and TeXLive. Using this package will flip landscape pages on the screen so that it’s easier to read.

```

165 \AtBeginDocument{
166   \RequirePackage{amsmath}
167   \RequirePackage{float}
168   \RequirePackage{booktabs}
169   \RequirePackage{rotating}
170   \RequirePackage{url}

```

```

171 \RequirePackage[doublespacing]{setspace}[2000/12/01]
172 \ifboolexpr{bool{pdf} or bool{xetex} or bool{luatex}}{%
173   \ifluatex

256 \setlength{\footnotesep}{\double@skip}
257 %

```

Define new lengths for some variables for a proper layout of normal pages, pages with text and figures and pages with only floats. Note that although the geometry package is usually easier, when Megan tried to switch to that she discovered that something ends up overwriting it and, although the the showframe option showed that the margins were

setting correctly, the text didn't look like they were. So these length values are set to what geometry said they should be to get a 1.5 in left margin and 1 in margins on all other sides (we'll use `vspace` commands later to get the 2 in top margin on pages where that's needed). Note that `\evensidemargin` is only used if the `twoside` class option is enabled.

```

titlepage The structuring begins with checking the proper macros for obtaining correct formatting for the title page. If any of those are not defined, an error is issued and processing stopped. Most of the code for this was taken from the earlier `ndthesis` class and hence, the documentation is also picked from there.

```

362 \begin{titlepage}%
363 \ifthenelse{\equal{\@work}{}}{\ClassError{nddiss2e}%
364 {The \protect\work\space macro is undefined.\MessageBreak
365 The title page may be incorrectly formatted.}%
366 {Specify \protect\work\space as Dissertation or Thesis}}{\relax}
367 \ifthenelse{\equal{\@degaward}{}}{\ClassError{nddiss2e}%
368 {The \protect\degaward\space macro is undefined.\MessageBreak
369 The title page may be incorrectly formatted.}%
370 {Specify \protect\degaward\space. It defines the awarded degree%
371 (Ph.D., M.S., etc.)}}{\relax}
372 \ifthenelse{\equal{\@advisor}{}}{\ClassError{nddiss2e}%
373 {The \protect\advisor\space macro is undefined.\MessageBreak
374 The title page may be incorrectly formatted.}%
375 {Spepcify \protect\advisor\space It is who signs your walking papers!}}{\relax}
376 \ifthenelse{\equal{\@department}{}}{\ClassError{nddiss2e}%
377 {The \protect\department\space macro is undefined.\MessageBreak
378 The title page may be incorrectly formatted.}%
379 {Specify which \protect\department\space is awarding your degree?}}{\relax}

```

```

380 \ifadvisors@two
381 \ifthenelse{\equal{\@secondadvisor}{}}{\ClassError{nddiss2e}%
382 {The \protect\secondadvisor\space macro is undefined.\MessageBreak
383     The title page may be incorrectly formatted.}%
384 {Use \protect\secondadvisor\space for your second advisor}}{\relax}
385 \fi
386 %

```

Now set up some skip registers to hold the inter-data spacing. The initial values will create a two-inch top margin for the title page, provided the title is only one line long. `\skip1` is the primary internal spacing command; `\skip2` is the spacing between the student's name and the line for the first adviser to sign if there are two advisers and `\skip3` is the spacing between the student's name and the line for the adviser to sign if there is only one adviser; `\skip4` controls the top margin. We'll account for titles longer than one line in a bit ...

```

387 \skip1=2.1\double@skip
388 \skip2=1.7\double@skip
389 \skip3=2.7\double@skip
390 \skip4=36pt
391 %

```

If the author has two advisers, we need to do a little tweaking to the internal spacing.

```

392 \ifadvisors@two
393   \skip1=1.6\double@skip
394 \else\relax
395 \fi

```

The 2012 formatting guidelines require the title to be 2" from the top of page. If it's more than one line long, we need to adjust the internal spacing:

```

396 \setbox0=\vbox{\MakeTextUppercase{\@title}}
397 \ifdim \ht0 > 3\double@skip
398   \advance \skip1 -.75\double@skip
399 \else
400   \ifdim \ht0 > 2\double@skip
401     \advance\skip1 -.5\double@skip

804 %

```

`\@maketablecaption` The `\@maketablecaption` is defined similarly to `\@makefigurecaption` to have the table label and caption in separate lines and with normal-spacing (double-spaced).

```

805 \long\def\@maketablecaption#1#2{
806   \vskip\abovecaptionskip
807   \begin{center}
808     \makebox[\linewidth]{
809       \parbox{\capwidth}{
810         \centering\normalspacing
811         \MakeTextUppercase{#1}\[\single@skip]
812         {#2}%\par
813       \vskip\belowcaptionskip}%
814     }%
815   \end{center}
816 }
817 %

```

`\longtable` Similar to the `table` environment, the `longtable` environment is made singly-spaced but the `\arraystretch` is made equal to double the `baselinestretch`.

```

818 \renewcommand\longtable{%
819   \singlespacing
820   \renewcommand{\arraystretch}{\double@baselinestretch}
821   \begingroup
822   \let\firstcaptiontrue
823   \ifnextchar[LT@array{\LT@array[x]}}
824 %

```

`\endlongtable` This bit is taken from `longtable.sty`. In order to obtain double-spacing in the list of

tables, a \vskip of 0.4em is added to .lot file.

```

825 \renewcommand\endlongtable{%
826   \crrc
827   \noalign{%
828     \let\LT@entry\LT@entry@chop
829     \xdef\LT@save@row{\LT@save@row}}}%
830 \LT@echunk
831 \LT@start
832 \unvbox\z@
833 \LT@get@widths
834 \if@filesw
835   {\let\LT@entry\LT@entry@write\immediate\write\@auxout{%
836     \gdef\expandafter\noexpand
837       \csname LT@\romannumeral\c@LT@tables\endcsname
838       {\LT@save@row}}}%
839 \fi
840 \ifx\LT@save@row\LT@@@save@row
841 \else
842   \LT@warn{Column \@width s have changed\MessageBreak
843     in table \thetable}%
844   \LT@final@warn
845 \fi
846 \endgraf\penalty -\LT@end@open
847 \addtocontents{lot}{\{\vskip 0.4em\} }%
848 \endgroup
849 \global\@mparbottom\z@
850 \pagegoal\vsize
851 \endgraf\penalty\z@\addvspace\LTpost
852 \ifvoid\footins\else\insert\footins{}\fi
853 }
854 %

```

\LT@makecaption For the longtable environment, the \LTcapwidth is set equal to \capwidth. In order to obtain consistent table captions, the command \LT@makecaption is modified in a similar manner as \maketablecaption.

```

855 \setlength{\LTcapwidth}{\capwidth}
856 \renewcommand\LT@makecaption[3]{%
857   \LT@mc@col\LT@cols c{\hbox to\z@{\hss\parbox[t]{\LTcapwidth{%
858     \vskip\abovetableskip%
859     \centering\normalspacing
860     \if@ltfirstcaption
861       #1{\MakeTextUppercase{#2} }\\[\single@skip]
862       \MakeTextUppercase{#3}\par
863     \else%
864       #1{\MakeTextUppercase{#2 (continued)}} \par
865     \fi
866     \global\@ltfirstcaptionfalse
867     \endgraf\vskip\belowtableskip}%
868     \hss}}}%
869 %

```

`\timenow` This macro is used in making the `\drafthead` and `\reviewheader` below. It outputs time in HH:MM format.

```
870 \newcommand\timenow{%
871   \@tempcnta=\time \divide\@tempcnta by 60 \number\@tempcnta:\multiply
872   \@tempcnta by 60 \@tempcntb=\time \advance\@tempcntb by -\@tempcnta
873   \ifnum\@tempcntb <10 0\number\@tempcntb\else\number\@tempcntb\fi}
874 %
```

`\diss@header` This header is used in the dissertation document when the `draft` or `review` option is used. These headers serve as a note for the date and time of the document compilation.

```
875 \newcommand{\diss@header}{%
876   \ifdiss@review Review \else Draft \fi document [\today\ at \timenow\]
877   }%
878 %
```

The header prepared above is put in the document by modifying the *plain* and *empty* pagestyles except when the `final` option is chosen.

```
879 \ifdiss@final
880   \renewcommand{\ps@plain}{
881     \renewcommand{\@oddhead}{\@empty}
882     \renewcommand{\@oddfoot}{\hfil\thepage\hfil}
883     \let\@evenhead\@oddhead
884     \let\@evenfoot\@oddfoot
885   }%
886 \else
887   \renewcommand{\ps@plain}{
888     \renewcommand{\@oddhead}{\framebox[\textwidth]{
889       \centering\footnotesize\tt\diss@header}}%
890     \renewcommand{\@oddfoot}{\hfil\textrm{\thepage}\hfil}
891     \let\@evenhead\@oddhead
892     \let\@evenfoot\@oddfoot
893   }%
894   \renewcommand{\ps@empty}{
895     \renewcommand{\@oddhead}{\framebox[\textwidth]{
896       \centering\footnotesize\tt\diss@header}}%
897     \renewcommand{\@oddfoot}{\@empty}
898     \let\@evenhead\@oddhead
899     \let\@evenfoot\@oddfoot
900   }%
901 \fi
902 %
```

`\bibsection` By redefining `\bibsection` macro, add the `\bibname` to the table of contents and as a chapter heading for the bibliography.

```
903 \ifnatbib@refs
904   \renewcommand{\bibsection}{
905     \chapter*{\bibname}%
906     \addcontentsline{toc}{chapter}{\bibname}%
907   }%
```

```

908 \fi
909 %

\bibfont Changed the \bibfont macro to obtain single-spacing within each bibliographic entry.
          Between different entries, it is still \normalspacing. In addition, when the numrefs
          option is selected, the \@biblabel is redefined to number the bibliographic entries as
          1. xxxx instead of the default [1] xxxx.

910 \ifnatbib@refs
911   \renewcommand{\bibfont}{\singlespacing}
912   \ifnum@refs
913     \renewcommand{\@biblabel}[1]{\hfill#1.\hfill}
914   \fi
915 \fi
916 %

          Lastly, after the bibliography in the final document, add a framed box which contains
          a blurb about the typesetting program and NDDiss2 $\epsilon$  version used for preparing the
          dissertation document.

917 \ifdiss@final
918 \AtEndDocument{
919   \vfill
920   \centering\singlespacing
921   \framebox[0.85\textwidth]{
922     \begin{minipage}{0.80\textwidth}\footnotesize%
